

Icebox and vending machine kit in HO scale

Assembly instructions for Icebox & Vending machine kit

Thank you for buying this Icebox & vending machine kit. Please take some time to read these instructions before you begin assembling.

This kit is milled in styrene plastic and is very easy to glue together using Plastruct Plastic Weld or similar glue products. The wall parts are tabbed and slotted for easier assembly. Take your time to identify all parts and lay them out as on the pictures to get an overview of how the kit goes together. Clean all parts for any burrs before you start gluing them together.

Glue the icebox sides together as shown. Insert a small drill or a piece of wire through the holes in the doors and the front to align the doors correctly, then glue them in place.

Bend a small piece of wire (not included) to form the handles and insert them through the holes. Glue in place with CA glue. Glue the vending machine together the same way.

Painting and final assembly

Paint the ice box white and the Coke vending machine black.

Before handling the decal sheet, I strongly recommend you seal it with a coat of Krylon Crystal Clear acrylic coating or Testors Dull Cote. Uncoated, you have a risk of rubbing off some of the print when handling it. When dry, cut out the logos using a sharp hobby knife and a steel ruler.

Finally put the decals on the icebox and vending machine

The vending machine front is self-adhesive. Touch up the white edge of the paper with a black Sharpie pen.

The icebox decals are water-slide. Cut them to fit.

Soak them in water for a few minutes and slide them onto the icebox
